

Shift Roster & Claims Management System

1. Product Requirements Document (PRD)

Purpose: Build a system to automate shift rostering, claims processing, payroll calculations, and compliance with South African labour laws.

1.1. Core Features

- 1.1.1. Employee Management
- 1.1.2. Shift Rotation Engine
- 1.1.3. Auto Roster Generation
- 1.1.4. Claims Processing
- 1.1.5. Compliance Validation
- 1.1.6. Dashboard & Reporting
- 1.1.7. Approval Workflow

2. Technical Requirements

2.1 Backend: Node.js / .NET / Java

2.2 Frontend: React

2.3 Database: PostgreSQL

2.4 Architecture: Modular services (Roster, Claims, Compliance, Reporting)

3. Jira Epics & User Stories

Epic 1: Employee Management

- As an admin, I want to create and manage employees so that I can maintain workforce records.
- As an admin, I want to assign employees to teams and roles.

Epic 2: Roster Generation

- As a system, I want to generate shift rosters automatically based on rotation patterns.
- As a manager, I want to view and approve generated rosters.

Epic 3: Claims Processing

- As an employee, I want to submit claims for worked hours.
- As a system, I want to calculate pay components automatically.

Epic 4: Compliance

- As a system, I want to flag violations of labour laws.
- As a manager, I want to review compliance alerts.

Epic 5: Reporting

- As a manager, I want dashboards showing hours and claims.
- As finance, I want reports for payroll processing.
